

Technical information

White Oak Radiator Service offers Simple and Affordable Online Shopping. Best-Selling and Most Popular Radiators. The dealer alternative store for quality radiators and service.

Is a radiator worth replacing? Having an optimally-running radiator in your car has numerous benefits to your car's health – and your safety. Replacing a broken radiator ensures that the rest of your engine won't break down in future years. It can also reduce engine corrosion, which will cause detrimental damage to the rest of the engine.

Should you replace old radiators? Over time the metal pipes and radiators in your heating system can rust. This rust is collected by the water running through your system and returned to the boiler where it can collect. This debris collection is called 'sludge,' and it's a good reason to replace old radiators.

What can a dirty radiator cause? A dirty radiator may cause overheating in the engine. Interesting tip: Hard water can also cause radiator corrosion. Don't use your garden hose to refill your radiator. A crack in the radiator also poses a significant problem.

What is a good radiator flush?

- Prestone Radiator Flush and Cleaner.
- Royal Purple Ice Super Coolant.
- Liqui Moly Radiator Cleaner.
- Irontite Thoroflush Radiator Flush.
- Bar's Leaks 10-Minute Radiator Flush.

Here are four signs your radiator is bad or failing:

Your vehicle is overheating. If your vehicle constantly overheats, especially under normal driving conditions, this is one of the most common signs that your radiator is bad or failing.

- Your vehicle is leaking coolant.
- Sludge builds up in your radiator.
- Low coolant levels.

Note: Our team has the equipment to soak, vat, flush, test, repair, rebuild and straighten fins.
